CarbonFoam Fiber Reinforce Panels® is a unique closed cell, lightweight composite product manufactured with cross-linked polymer foam and fiberglass, offering high specific strength and toughness. The non-absorbent material is extremely durable and dimensionally stable, provides an excellent bonding surface, has good impact strength, sound and thermal insulation, and is resistant to contamination and high temperatures.

Our CarbonFoam Fiber Reinforced Panel® is manufactured in a thicknesses from .25" to 2", dimensions up to 60" wide and 170" long, and a density range of 10-40 lbs/ft³, depending upon the product line. CarbonFoam Fiber Reinforce Panels are ideally suited as core material for a variety of lightweight sandwich structures, and compatible with a wide range of resins and adhesive processes.

### CHARACTERISTICS
- Self-extinguishing
- Low resin absorption
- Great impact strength
- Good styrene resistance
- Great strength/stiffness to weight ratio
- High insulation properties (sound an thermal)
- High heat distortion temperature
- Rot free

### INDUSTRIES
- **Marine**: Superstructures, decks, hulls, bulkheads
- **Industrial**: Tanks, covers, portable shelters, container
- **Wind Power**: Nacelles, rotor blades
- **Recreational**: Kayaks, canoes, snowboards, skis, surf/wakeboards
- **Road**: Floors, doors, side skirts, roof panels, partition walls

### PROCESSING
- Adhesive bonding
- Compression Molding
- Thermoforming
- Contact molding
- Vacuum Infusion
- Resin Injection
